

CLASS 17+18: LEARNING RESOURCES

React Router	Project Planning	■ AI Workflow
--------------	------------------	---------------

01 React Router Official Documentation

React Router Getting Started — reactrouter.com

<https://reactrouter.com/en/main/start/tutorial>

The official step-by-step tutorial. Builds a contacts app from scratch using all the Router features covered in class. Follow this alongside your mini project for best learning.

BrowserRouter, Routes, Route — reactrouter.com/docs

<https://reactrouter.com/en/main/routers/browser-router>

Complete API reference for the three main components. When you're unsure about a prop or behaviour, check here before asking AI.

useParams Hook — reactrouter.com/docs

<https://reactrouter.com/en/main/hooks/use-params>

Official useParams documentation. Short and clear. Covers edge cases like optional params and nested routes.

useNavigate Hook — reactrouter.com/docs

<https://reactrouter.com/en/main/hooks/use-navigate>

Covers programmatic navigation options: going to a path, going back, replacing history. Directly relevant to your back buttons.

NavLink — isActive styling patterns

<https://reactrouter.com/en/main/components/nav-link>

Shows multiple patterns for NavLink active styling: className function, style function, and the default active class. Use this to style your navbar correctly.

02 YouTube Tutorials

The Net Ninja — React Router v6 Tutorial Series

Search YouTube: "Net Ninja React Router v6 tutorial"

A dedicated 8-part series on React Router v6. Covers everything from class in more depth with progressively complex examples. Watch at 1.5x speed if you're comfortable.

Traversy Media — React Router v6 in 45 Minutes

Search YouTube: "Traversy Media React Router 6 crash course"

A single-video crash course that covers all major Router features. Good for a second pass after class to consolidate everything.

Web Dev Simplified — Learn React Router in 10 Minutes

Search YouTube: "Web Dev Simplified React Router"

Fast, focused overview. Best watched before starting the mini project to quickly review the key patterns.

03 Mini Project APIs — Official Docs

TMDb API Documentation — Movie Database

<https://developer.themoviedb.org/docs>

Complete API reference for Option 1. Read the "Getting Started" section first, then find the endpoints for popular movies, search, and movie details.

TheMealDB API — Recipe Finder

<https://www.themealdb.com/api.php>

Complete endpoint list for Option 2. All endpoints, parameters, and example responses. No key needed — just copy any URL and test it in your browser.

REST Countries API Documentation

<https://restcountries.com/#endpoints-all>

Complete field reference for Option 3. Lists every field available and how to filter for only what you need (use the fields parameter to speed up requests).

04 ■ AI Workflow for Your Mini Project

Use these prompt templates at different stages of your project build:

Day 1 — Planning:

I'm building a [Movie Database / Recipe Finder / Country Explorer] app with React, Vite, and React Router. Help me: 1) Plan the folder structure 2) List all components I'll need 3) Decide where state should live 4) Write the initial App.jsx with all routes set up.

Detail Page — useParams:

I'm building the detail page for my [project]. It needs to use useParams to get the :id from the URL and fetch data for that specific item. Here's my current code: [paste]. What's wrong and how do I fix it?

API Structure Help:

I'm fetching from [API URL]. Here's what the response looks like: [paste JSON]. What fields should I use to build a card showing image, title, and [third field]? Show me the JSX.

Search Feature:

I need to add a search/filter feature to my home page. The search state should be in [component] and filter the [data] array. Here's my current HomePage: [paste]. How should I add this without breaking what's already working?

Deployment Help:

My app works on localhost but after deploying to Netlify, refreshing any page other than / gives a 404 error. What's causing this and how do I fix it?

05 Quick Reference — Router Cheat Sheet

```
// main.jsx: import { BrowserRouter } from 'react-router-dom'; <BrowserRouter><App /></BrowserRouter> //
App.jsx: import { Routes, Route } from 'react-router-dom'; <Routes> <Route path="/" element={<HomePage />} />
<Route path="/item/:id" element={<ItemPage />} /> <Route path="*" element={<NotFound />} /> </Routes> //
Navigation: import { Link, NavLink } from 'react-router-dom'; <Link to="/about">About</Link> <NavLink to="/"
style={({isActive}) => ({color: isActive ? 'blue' : 'grey'})>Home</NavLink> // Dynamic page: import {
useParams, useNavigate } from 'react-router-dom'; const { id } = useParams(); const navigate = useNavigate();
navigate('/home'); // go to /home navigate(-1); // go back
```
